

**DATA SCIENCE
PROJECT REPORT
(Project Semester January-April 2025)**

Inventory of Owned and Leased Properties

Submitted by

Aman kumar Shrivastav

Registration No: 12325875

B.Tech CSE – KM005

Course Code: INT217

Under the Guidance of

Baljinder Kaur

Assistant Professor, CSE

Lovely School of Computer Science and Engineering

Lovely Professional University, Phagwara

CERTIFICATE

This is to certify that Aman kumar shrivastav bearing Registration no. 12325875 has completed Data Science project titled, "Inventory of Owned and Leased Properties" under my guidance and supervision. To the best of my knowledge, the present work is the result of his/her original development, effort and study.

Baljinder Kaur

Assistant Professor, CSE

School of Computer Science and Engineering

Lovely Professional University

Phagwara, Punjab.

Date: 2025-04-12

DECLARATION

I, Aman kumar Shrivastav, student of B.Tech CSE under CSE Discipline at Lovely Professional University, Punjab, hereby declare that all the information furnished in this project report is based on my own intensive work and is genuine.

Date: 2025-04-12

4. Analysis on Dataset

iv. Visualizations

The following visualizations were used to present the analytical findings:

5. Conclusion

The analysis of owned and leased properties reveals clear patterns in asset distribution, with owned properties concentrated in residential areas and leased properties prevalent in commercial zones. This distinction highlights strategic preferences in property acquisition and utilization. District-level insights point to potential areas for investment and policy enhancement. The data also underscores the importance of regular audits to maintain accurate records and improve asset management. Overall, the study serves as a valuable resource for informed decision-making in property planning and development.

6. Future Scope

This project lays the groundwork for several future enhancements:

- Integrating financial, demographic, and zoning data to better understand property utilization trends.
- Employing machine learning models to predict future property demands and leasing patterns.
- Real-time data integration for live tracking and dynamic inventory updates through dashboards.
- Collaborating with government agencies and real estate firms for effective asset management and policy-making.
